

CartWatch™ Remote Management System

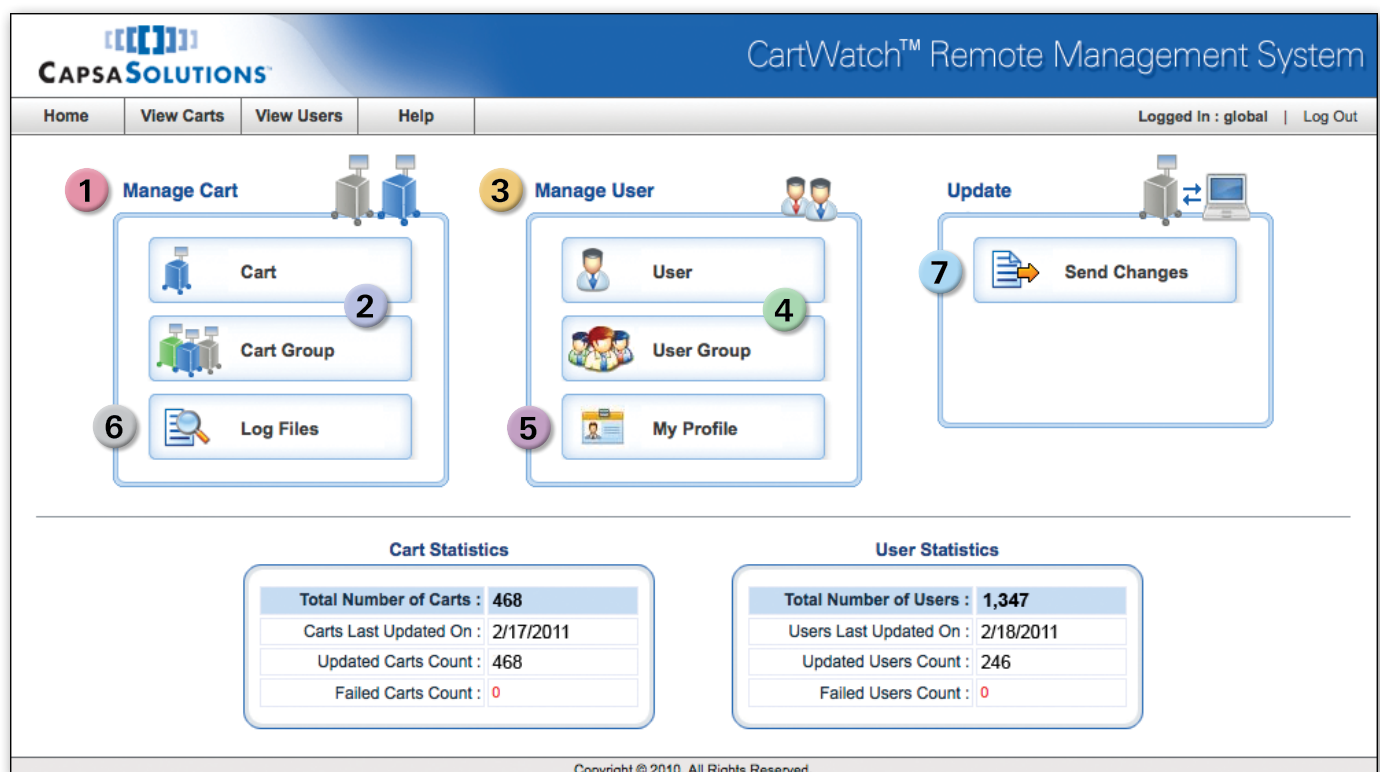

Remote Cart Security Management Software

The NEW CartWatch Remote Management System from Capsa Solutions introduces a new capability to streamline cart security management and support your facility's fleet organization program.

Developed using direct feedback from health IT managers and clinical staff, CartWatch RMS permits cart fleet security control from a single remote PC location. This saves time and eliminates the need to visit each cart when a access code or user profile requires an update.

CartWatch RMS is extremely flexible and permits Cart and User management individually or by creating groups. For improved control, Cart-based log file reports can be created quickly and customized to review the data you want to see most.

CartWatch RMS from Capsa Solutions. Improved risk management and complete cart security control, all from the convenience of your remote PC.
